TECHNICAL SKILLS

- **AI & LLM Frameworks:** LangChain, LangGraph, RAG, GraphRAG, AgenticRag Large Language Models (LLMs), AI Autonomous Agents, Prompt Engineering.
- **Backend Technologies:** FastAPI, Node.js, Express.js, REST APIs, System Architecture, JWT Authentication, Socket.io, Microservices, Celery, asyncio.
- **Frontend Development:** React.js, Next.js, HTML5, CSS3, JavaScript (ES6+).
- **Programming Languages:** Python, JavaScript, SQL, TypeScript, Cypher.
- **Databases & Vector Stores:** PostgreSQL, MongoDB, Pinecone, ChromaDB, Neo4j, Qdrant, Redis.
- **Libraries & Cloud Tools:** Git, Docker, Postman, Vercel, Render, Huawei ModelArts, OpenCV.

PROFESSIONAL EXPERIENCE

Techling Private Limited — Backend & AI Engineer (Doing Job) Dec 2025 – Present

- Architected scalable system architectures utilizing Node.js, Express.js, MongoDB, and PostgreSQL, increasing REST APIs response efficiency by 40% for high-traffic production environments.
- Integrated LLM-based intelligent applications (Claude, GPT, Gemini) via LangChain and RAG, automating 85% of complex data extraction workflows.
- Collaborated with cross-functional teams to deploy secure microservices, accelerating CI/CD deployment cycles by 2 weeks and ensuring resilient software solutions.

Digital Empowerment Network — Python Developer Aug 2024 – Sep 2024

- Orchestrated comprehensive data scraping pipelines processing 50,000+ records daily using Python to analyze and visualize complex datasets.
- Formulated high-performance endpoints utilizing FastAPI and Flask, reducing database CRUD operation latency by 30%.

Enablers Pakistan — Amazon Private Label Product Launch (Freelance) Jun 2023 – Nov 2023

- Managed end-to-end launch cycles for a U.S. client, driving a 25% increase in initial product listing visibility through data-driven technical optimization.

TECHNICAL PROJECTS

GraphRAG Enterprise Knowledge Intelligence Platform | Python, FastAPI, Next.js, LangGraph, Neo4j, Qdrant

- Pioneered an enterprise-grade retrieval system combining Qdrant vector search and Neo4j knowledge graph traversal, resolving complex multi-hop questions across unstructured PDFs with a 40% improvement in context accuracy.
- Streamlined a decoupled architecture using Celery for asynchronous ingestion and Redis semantic caching, reducing query latency by 35% while utilizing Self-RAG and LLM-as-a-Judge evaluations to ensure highly faithful outputs.

AI Shopping Copilot | FastAPI, Next.js, LangGraph, ChromaDB

- Spearheaded the development of AI autonomous agents capable of semantic search and complex routing, successfully handling 1,000+ concurrent user intents with 95% accuracy.
- Implemented RAG pipelines and Llama Vision models to perform dynamic side-by-side product comparisons, delivering data retrieval 3x faster than legacy systems.

GoldPulse Real-Time Gold Trading Platform | Next.js, Node.js, Express.js, MongoDB, Socket.io

- Constructed a multi-layer data pipeline streaming live XAU/USD prices to 2,300+ historical OHLC records with zero downtime during external API outages.
- Deployed interactive trading dashboards featuring robust JWT authentication and proxy-based API key protection, ensuring 99.9% system security.

AI-Powered Expense Management System | React.js, Node.js, Express.js, PostgreSQL, Google Gemini

- Engineered a full-stack financial application featuring rigorous PostgreSQL schema migrations, securely processing \$100k+ in simulated transactions.

Production-Ready Spotify Clone Backend | Node.js, Express.js, MongoDB

- Designed a modular MVC backend architecture with Express Validator and cloud media storage, reducing query response times by 20%.

Blood Work Analyzer | LangChain, Gemini, Streamlit

- Devised a two-stage Generative AI pipeline to parse complex clinical lab values, generating personalized, region-specific diet plans in under 3 seconds per report.

True Vision Deepfake Video and Image Detection System | Flask, PyTorch, CNN, LSTM, OpenCV

- Partnered alongside team member Muhammad Usama under the supervision of Tamour Ali Khan to build a robust, Dockerized Flask web application, achieving 92% deepfake detection accuracy.

Cloud Technologies, AI & Machine Learning | Huawei ModelArts

- Trained deep learning models on cloud GPUs, automating evaluation pipelines and reducing model inference latency by 15% via scalable cloud RESTful APIs.

EDUCATION & CERTIFICATIONS

University of Science & Technology

2021 Nov-Jul 2025

Certifications:

Huawei Certified Cloud Developer Associate - Artificial Intelligence (HCCDA-AI), UET Lahore

AI Fluency: Framework & Foundations, Anthropic Academy

Claude 101, Anthropic Academy
